on the 145.230-600 repeater MHz, PL tone off. •

DXCC

The ARRL DX Century Club Program

From its simple beginnings, culminating in the announcement of the new DX award, The DX Century Club, in September 1937 QST (which was itself based on the "ARRL List of Countries" published in January 1937 QST), membership in the ARRL DX Century Club (DXCC) has been the mark of distinction among radio amateurs the world over. That it is regarded with such prestige by DXers is a testament to its integrity and level of achievement. The high standards of DXCC are intensely defended and supported by its membership. The rules established by the founders of DXCC were consistent with the art of Amateur Radio as it existed at the time. As technology improved the ability to communicate, the rules were progressively changed to maintain a competitive environment and complement the gaining popularity of DXCC.

Because of the vast changes in the international scene brought about by World War II, it logically followed that DXCC needed to be recast, as indicated in December 1945 QST. Ultimately, after a great deal of study, the first postwar DXCC Countries List emerged as published in February 1947 QST. The new DXCC Rules appeared in March 1947 QST. Contacts were valid from November 15, 1945, the date US amateurs were authorized by the FCC to return to the air following World War II.

The DXCC rules today represent the aggregate of experience gained from administering postwar DXCC. Some countries on the DXCC Countries List do not, of course, meet the present criteria. This includes countries "grandfathered" from the WW II era or those that met the criteria as it existed at the time and are not subject to deletion (see Section III for the appropriate grounds for deletion). Changes are announced under DXCC Notes in *QST ARRL Notes*.

PROGRAM NOTES:

PAARA Meeting, September 6, 1996

Thanks to *Steve Stuntz, K6FS*

September's meeting program was a 45-minute audio/visual account of PAARA 1996 Field Day activities, presented by our irrepressible roving videographer, Tom Scherf, K6BJR. Starting with a sweeping look at the site, we were treated to a detailed look at antenna erection, then operations on HF, CW and SSB, and VHF/UHF satellite, as well as packet. Tom had edited several hours of video footage down to ¾ of an hour (to fit meeting time-length restrictions imposed by Menlo Park Recreation Dept.), and added narration via post-production voice-over. {How about making video documentation of club activities an ongoing project? -Steve, K6SF}

COMING ATTRACTION -October 4, same time, same place: Milt Camp, K6OYX, longtime ham, aircraft pilot, and founder of *Los Médicos Voladores*, gives an illustrated description of volunteer medical services to remote areas in northern Mexico - and the support given by amateur radio.

"Now that's a good omen."

Here & There

Subj: PAARA Board
Date: 96-09-16
From: Richard Stibel
To: aa6pa@amsat.org, wmporter@aol.com

It has become apparent that my present commitments are preventing me from taking an active part as a PAARA Board member. For that reason, I feel it is in the best interests of both PAARA and me to leave the Board and make room for someone to take my place who will take an active roll in the organization.

I plan to continue to participate in club activities as much as possible.

Sincerely,
Rich Stibel, W6APZ

History, Past and Present

—Steve Stuntz, K6FS
PAARA Club Historian

Almost ten years ago (back when Kenwood's TS-440S AT was a hot ticket), the Director of Recreational Therapy, Western Blind Rehabilitation Center, Veterans Administration Medical Center, Palo Alto,

invited PAARA to give periodic talks about ham radio to groups of sight-impaired veterans, temporarily in residence as students in special skill-training programs. The object was to promote amateur radio as a recreation accessible to people with limited or no vision. PAARA accepted the invitation, and has been holding monthly evening meetings at the Center ever since, one and occasionally two PAARA volunteers officiating. Although attendance at these sessions varies from zero to a record maximum of eight curious - and usually genuinely interested - vets, the program hasn't faltered, and has received continuing recognition from the Center's staff.

To make sure that interested veterans get off to a running start when they return to their home QTH's, the PAARA visitor takes name, address, telephone number, and expected return-home date of each, then sends the data to the Manager of the ARRL Section in which the student lives. Three years ago a form letter was developed, describing the VA/PAARA program, the student's background in electronics or related technologies, and desire for information, training, license exam data, and personal contacts with local hams (i.e., "Elmers"). Since the start of this "Elmer-hunt" procedure, Section Managers in Western U.S. have been notified on the behalf of over 50 potential hams. Section Managers have been enthusiastically helpful, according to reply-letters and packet messages.

BACKGROUND: This program got a big boost when it was first set up, from American Legion Amateur Radio Post 380, through **Keith Trammell, W6QZE**. The Post donated a Butternut antenna (erected by PAARA members on the roof of the Center's building), and helped arrange donation of a Kenwood TS-440S AT equipped with speech synthesizer + power supply, by Kenwood via our old friend "**George**", of **HRO** back in the Burlingame days. That rig, plus a Kenwood 2-m FM transceiver, power supply, and antenna, donated by the estate of an SK ham up in Sierra country, make up a complete working station located in the Blind Rehab Center. While it's available to any student already licensed, or to a qualified Center staffer, it is used especially to demonstrate amateur radio during the monthly PAARA visits. Propagation permitting, an HF

QSO or two shows off long-range possibilities (the distant station is always told what's going on, and the students are invited to exchange greetings with him/her); local repeater operation is demonstrated with the VHF rig.

These seminars meet for two hours on the fourth Wednesday of each month, from 7:30 p.m. to 9:30 p.m., and consist of discussion about what ham radio is, how it can be entered and operated by visually-impaired people under present FCC rules, and how interested hams can perform public services. Attention is directed to the availability of recorded training materials, as well as special license exams for the handicapped. Also given is an overview of ARRL's organization and services, including the Section Manager's function. Interested students are given the names, phone numbers and QTH's of their Section Managers as listed in current QST.

In appreciation, PAARA volunteers are enrolled for recognition by Center management, and are invited to special events such as cook-outs, entertainment, and award ceremonies - and to show off a working ham station to anybody interested.

This is a gratifying opportunity to stimulate interest in a constructive, people-connecting avocation, as well as to broaden horizons for men and women who are trying to keep in touch with the world despite handicap. PAARA members are always welcome to participate; for details, contact **Steve, K6SF**.

(Steve has supported this program since its beginning. He could use help to cover his vacations or possible brief illness. -editor)

ARRL

ARLB062:

ARRL Petitions FCC To Change Safety Rules

QST de W1AW

ARRL Bulletin 62 ARLB062

From ARRL Headquarters

Newington CT September 10, 1996

To all radio amateurs

The ARRL has petitioned the FCC to reconsider and reverse portions of the Commission's August 1, 1996, Report and Order that imposed RF-emission safety standards on Amateur Radio, including a 50-W threshold to trigger an RF-safety evaluation. In setting the 50-W threshold, the ARRL said, the FCC failed to consider the effect of antenna height, antenna gain, emission mode, duty cycle or operating frequency. The League asked the FCC either to scale the evaluation threshold by frequency to match the maximum permissible exposure (MPE) limits--directly corresponding to the way the regulations scale the exposure levels with frequency--or to set the evaluation threshold for all HF operation at 150 W at a distance of 10 meters from all parts of the antenna.

At or below that power level and at that distance from the radiator, "you'd be well on the side of safe, even at 100 duty cycle, with any antenna likely to be encountered on HF," said ARRL Laboratory Supervisor Ed Hare, KA1CV, our HQ staff liaison to the ARRL RF Safety Committee. "Some VHF/UHF and microwave station configurations could result in an RF exposure exceeding the requirements of the regulations, so the 50-W limit to trigger an evaluation is more appropriate above 30 MHz," said Hare. He emphasized that all stations, regardless of output power or frequency, still must abide by the specified MPE limits for RF.

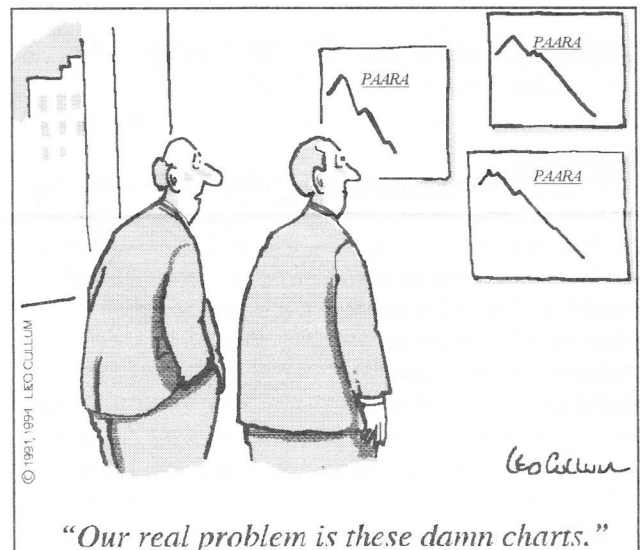

The new rules, effective January 1, 1997, require licensees of amateur stations running 50 W output or more on any band to conduct a routine RF-safety evaluation to determine if the station could expose people to RF levels that exceed the MPE limits specified in the new rules. (Mobile installations using push-to-talk, regardless of power, are exempt from the environmental evaluation requirement.) In its reconsideration filing, the League called the 50-W threshold "regulatory overkill" and "without scientific basis." Among other things, the League said the means to conduct RF radiation evaluations are not yet available, and the ability to reconfigure a station that might exceed the new limits "is highly problematic." Coupled with any state and local land-use and RF-exposure regulations that might exist, application of the new rules "may constitute a de facto revocation or modification of the station license," the League said.

The League also said the FCC adopted the rules "through flawed procedures" and without advance notice and opportunity for prior comment.

The ARRL said that the new rules differentiate between ham stations and other Commission licensees "which are treated far less restrictively." While the FCC preempted state and local government regulation of personal wireless service facilities based on environmental effects of RF emissions, it refused to do the same for ham radio "without any basis for the distinction."

The ARRL already has asked the FCC to extend the deadline to change amateur examinations and modify question pools, but the Commission has yet to act on the request. The League said that, as it now stands, hams have no way to determine the scope of their obligations under the new rules.

The League suggested the FCC vacate its new RF safety rules governing amateur stations and issue a further notice to permit comment on the proposed rules, and, in particular, the 50-W evaluation threshold. NNNN/EX

CONTESTS

September 28-29

CQ WW RTTY Contest, sponsored by CQ magazine and The Digital Journal, 0000Z Sep 28 to 2400Z Sep 29. Single-op all-band high or low power, single-op single-band; single-op assisted; multi-single high or low power; multi-multi. W/VE stations send RST, state/province, and CQ Zone number; others send RST and CQ Zone number. Work stations once per band. Score 1 pt/QSO with own country; 2 pts/QSO in same continent; 3 pts/QSO different continent. Multipliers are states (48), provinces (13), DXCC/WAE countries and CQ zones per band. Final score is QSO points × multipliers. Awards. Send logs to Roy Gould, KT1N, PO Box DX, Stow, MA 01775.
